Type 8793

Process controller Diaphragm valve

The Type 8136 is a non-contact radar level measuring device for continuous level measurement.

The unit is available in two versions: - with encapsulated horn antenna particularly suitable for level measurement of aggressive liquids in small vessels.

- with plastic horn antenna particularly suitable for measurement in open flumes or gauge measurement in waters.

OEM radar measuring device, for aggressive media level measurement

- For level measurement up to 20 m, 4... 20 mA/Hart -2 wires
- Adjustable via Display, key operation or PC-Tool with DTM
- ATEX approvals (Ex)
- Insensitive to variations of temperature, pressure, medium data of the product and gas layers

Type 8802-GD Element control valve system

FLUID CONTROL SYSTEMS

Valve islands

PLC

Target applications

Dosing and processing systems

Level measurement:

The radar measuring principle is particularly suitable for continuous level measurement of toxic and corrosive substances. The measurement is non-contacting, i.e. there is no direct contact with the medium.

Due to the very small process connection and the PVDF encapsulated antenna, the 8136 radar level measuring device is ideal for this application.

Open flumes

Measurement for heavy demands:

Radar level measuring device like the Type 8136 are also suitable for measurement in open flumes. For wastewater treatment in chemical plants, where wastewater temperatures change drastically or where solvents are contained in the wastewater, the use of radar level measuring device is recommended.

Principle of operation

The radar measuring device consists of an electronic housing, a process connection element the antenna and a sensor. The antenna emits short radar pulses with a duration of approximate 1 ns to the medium. These pulses are reflected by the medium surface and received by the antenna as echoes. Radar waves travel at the speed of light. The running time of the radar pulses from emission to reception is proportional to the distance and hence to the level. The determined level is converted into an output signal and transmitted as a measured value.

The measuring device can be adjusted with:

- the display/configuration module
- the suitable Bürkert DTM in conjunction with adjustment software according to the FDT/DTM standard, e.g. PACTware™ and PC
- a HART handheld

The entered parameters are generally saved in the measuring device Type 8136. Optionally, parameters may also be uploaded and downloaded with the display/configuration module or save in a file by using PACTware™/DTM

Set up with display/configuration module

The display/configuration module can be inserted into the measuring device and removed again at any time. It is not necessary to interrupt the power supply. The measuring device is adjusted via the four keys of the display/configuration module

Set up with PACTware™/DTM and HART communication

Connecting the PC via HART

- 1. Measuring device 8136
- 2. HART-USB Modem
- 3. Resistance 250 Ohms

Necessary components:

- Measuring device 8136
- PC with PACTware[™] and suitable Bürkert DTM

8137

General purpose high pressure radar level measuring device

- For level measurement up to 30 m
- 4... 20 mA/Hart 2 wires
- Adjustable via Display, key operation or PC-Tool with DTM
- ATEX approvals 🔄

Type 8802-GD Element control valve system

General data

Type 8644 Valve islands

The Type 8137 is a non-contact radar level
measuring device for continuous level meas-
urement.

Type 2103

Diaphragm valve

The unit is available in two versions:

Type 8793

Process controller

- with thread and horn antenna (ø 40 mm) particularly suitable for use in small tanks and process vessels for measurement of almost any product.

- with flange and horn antenna (ø 40 or 75 mm) particularly suitable for use in storage tanks and process vessels for measurement of media such as solvent, hydrocarbons and fuels under extremely difficult process conditions.

Target applications

In storage tanks

Lacquers, paints and thinners are stored in tanks up to 15 m high. These substances require no pre-treatment and are fed directly to incinerators via smaller day tanks. Agitators inside the tanks prevent fibrous materials and colour pigments from clumping and settling on the bottom. The 8137 radar measuring device is the ideal solution here for level measurement. The radar measurement is unaffected by ambient conditions, such as strong vapour emission of the waste, and delivers accurate measuring results even when the agitators are in motion.

In the digester, in the decanter

The bauxite is decomposed by adding thinned caustic soda and mixing it thoroughly with the bauxite in the digester. To achieve an optimal utilisation of the process, it is important to regulate the filling level in a fixed range. Contactless radar technology has all the right prerequisites for this measurement task. The 8137 radar measuring device records the current level and passes it on to the control system. Even the rotating agitator blades do not disrupt the measurement. Also in the decanter, which immediately follows the digester, the 8137 reliably performs its service in temperatures up to 200°C and pressures up to 40 bar. The steam atmosphere prevailing in the vessel does not affect the measurement either.

Principle of operation

The radar measuring device consists of an electronic housing, a process connection element the antenna and a sensor. The antenna emits short radar pulses with a duration of approximate 1 ns to the medium. These pulses are reflected by the medium surface and received by the antenna as echoes. Radar waves travel at the speed of light. The running time of the radar pulses from emission to reception is proportional to the distance and hence to the level. The determined level is converted into an output signal and transmitted as a measured value.

The measuring device can be adjusted with:

- the display/configuration module
- the suitable Bürkert DTM in conjunction with adjustment software according to the FDT/DTM standard, e.g. PACTware™ and PC
- a HART handheld

The entered parameters are generally saved in the measuring device Type 8137. Optionally, parameters may also be uploaded and downloaded with the display/configuration module or save in a file by using PACTware™/DTM

Target applications

In highly purified water

The manufacture of products, which are either injected directly into the bloodstream, or administered as nose or eye drops, requires high purity water (WFI). The measuring device 8138 is especially suitable for level measurement in the WFI storage tank. The contactless measurement is unaffected by pressure or vacuum. The front flush antenna of the Type 8138 guarantees optimum CIP and SIP cleaning results. The antenna is PTFE encapsulated to protect it against highly ionised water.

In the stirring and preparation vessel

Processes like yoghurt production take place in controlled, highly sterile surroundings. They therefore place heavy demands on the cleanability of all parts that touch the medium. The cleaning processes themselves are correspondingly thorough. Contamination with foreign bacteria would lead to spoilage of the entire batch.

The radar measuring device 8138 lends itself well for reliable level measurement here. The contactless measuring principle is not affected by the density changes in the yoghurt and the abrasiveness of the fruits. The front-flush antenna allows optimal CIP and SIP cleaning, is insensitive to high-pressure water jets and doesn't show thermal shock behaviour.

Principle of operation

The radar measuring device consists of an electronic housing, a process connection element the antenna and a sensor. The antenna emits short radar pulses with a duration of approximate 1 ns to the medium. These pulses are reflected by the medium surface and received by the antenna as echoes. Radar waves travel at the speed of light. The running time of the radar pulses from emission to reception is proportional to the distance and hence to the level. The determined level is converted into an output signal and transmitted as a measured value.

The measuring device can be adjusted with:

- the display/configuration module

Radar level meter for liquids suitable for use in applications with aggressive fluids as well as with hygienic requirements

- Continuous level measurement up to 30 m, 4...20 mA, 2-wire
- Available process connections: Plastic horn antenna, thread (G, NPT ¾ and 1½), flange (DN50, DN100), clamp (2")
- Excellent radar signal focusing and high measurement dynamics
- Adjustable using the display/configuration module and keys, alternatively via PC-Tool with DTM

Product variants described in the data sheet may differ from the product presentation and description.

Can be combined with

Type 8619 multiCELL - Multi-channel and multi-function transmitter/controller

Type 8611 eCONTROL - Universal controller

Туре 8692

Digital electropneumatic Positioner for the integrated mounting on process control valves

Type 8644 I Remote Process Actuation Control System AirLINE

Type description

The Type 8139 is a non-contact radar level measuring device for continuous level measurement.

It is available with:

- integrated antenna (G- or NPT connection), especially suitable for level measurement of aggressive liquids, with special advantages for small vessels.
- plastic horn antenna (with mounting bracket), especially suitable for measurements in open flumes or gauge measurement in water.
- flange connection (DIN 2501) with encapsulated antenna system,
- clamp connection (DIN 32676, ISO 2852) with encapsulated antenna system for hygienic requirements.

The high focus of the radar signal and the high measurement dynamics allow excellent measurement results even in small, narrow and high containers, as the risk of signal interference by installations, constructions and vessel walls is much lowered. Signal damping, e.g. due to signal running length, foam build-up, low DK values of the liquids, has a much smaller effect.

1. General technical data

Product properties	
Materials	
Non wetted parts	
Depending on antenna system. Detailed	information can be found in chapter "2. Product versions" on page 5.
Housing	Plastic PBT (Polyester), PPS and stainless steel 316L (1.4404)
Cover	PC transparent
Seal between housing and housing	EPDM
cover	
Cable gland	PA
Blind plug	PA
Ground terminal	Stainless steel 316L
Wetted parts	
Depending on antenna system. Detailed	information can be found in chapter "2. Product versions" on page 5.
Dimensions	Detailed information can be found in chapter "3. Dimensions" on page 7.
Weights	Approx. 217.2 kg (depending on process connection and antenna)
Measuring variable	Distance between the end of the sensor antenna and the product surface.
Measuring range	Max. 30 m (depending on antenna system). Detailed information can be found in chapter "2. Product versions" on page 5.
Beam angle ^{1.)}	Depending on antenna system. Detailed information can be found in chapter "2. Product versions" on page 5.
Damping (63 % of the input variable)	0999 s, adjustable
Step response time ^{2.)3.)}	≤3 s
Product accessories	
Display	LCD in full dot matrix (optional, must be ordered separately)
Performance data	
Blocking distance	Null
Measurement deviation	According to EN 60770-1: \leq 1 mm for liquids (measuring distance > 0.25 m). Detailed information can be found in chapter "4.1. Measurement deviation diagram" on page 10.
Measuring range resolution	1 mm
Measuring frequency	W-Band (80 GHz technology)
Measuring cycle time ^{2.)}	Approx. 700 ms
Temperature drift	<0.03 %/10K relating to the 16 mA span or max. 0.3 %
Repeatability ^{4.)}	≤1 mm
Vibration resistance	Depending on antenna system. Detailed information can be found in chapter "2. Product versions" on page 5.
Shock resistance	100 g, 6 ms according to EN 60068-2-27 (mechanical shock)
Electrical data	
Operating voltage (U _n)	1235 V DC
Starting current	≤3.6 mA; ≤10 mA for 5 ms after switching on
Load resistor	$(U_n - U_{min})/0.022 A$
Output signal	420 mA/HART
Signal resolution	
Range of the output signal	3.820.5 mA/HART (default setting)
Pault signal	Current output: mA value unchanged, 20.5 mA, 22 mA or <3.6 mA (adjustable)
Residual ripple (at DC)	22 IIIA
	For $12 V < U_n < 15 V \le 0.7 V_{eff} (10400 Hz)$ For $18 V < U_n < 35 V \le 1.0 V_{eff} (16400 Hz)$
Voltage supply cable	Cable diameter: 59 mm
	Wire cross-section (spring-loaded terminals):
	 massive wire, stranded wire: 0.22.5 mm² (AWG 2414)
	 stranded wire with end sleeve: 0.21.5 mm² (AWG 2416)
Media data	
Process temperature	Depending on antenna system. Detailed information can be found in chapter "2. Product versions" on page 5.
Process pressure	Depending on antenna system. Detailed information can be found in chapter "2. Product versions" on page 5.

Process/Port connection & communication			
Process connection	 Mounting bracket 170 mm (supplied as standard) or 300 mm (accessory) (version with plastic horn antenna) 		
	 Thread G or NPT - ¾" or 1½" (version with integrated horn antenna) 		
	Flange DN50, DN100 DIN 2501 (version with encapsulated antenna system)		
	 Clamp 2" DIN 32676, ISO 2852 (hygiene connection version with encapsulated anten- na system) 		
Electrical connection	Cable gland M20 x 1.5		
Approvals and Certificates			
Standards			
Degree of protection according to IEC/ EN 60529	IP66/IP67 with cable plug mounted and tightened M20x1.5		
Overvoltage category according to IEC 61010-1	Category III		
Protection class according to IEC 61010-1	Class III		
Directives			
CE directives	The applied standards, which verify conformity with the EU Directives, can be found on the EU Type Examination Certificate and/or the EU Declaration of conformity (if applicable)		
NAMUR recommendations	NE21- Electromagnetic compatibility of equipment NE43 - Signal level for fault information from measuring transducers NE53 - Compatibility of field devices and display/adjustment components		
Environment and installation	NE107 - Self-monitoring and diagnosis of field devices		
Ambient temperature	Operation and stars $40 \times 90\%$ ($40 \times 176\%$		
Temperature derating	Depending on antenna system Detailed information can be found in chapter "4.2 Tam-		
lemperature derating	perature derating diagram" on page 11.		
Relative air humidity	2085 %, without condensation		
Height above sea level	By default: max. 2000 m With connected overvoltage protection: max. 5000 m		
Pollution degree	Degree 4 (when used with fulfilled housing protection)		

1.) Outside the specified beam angle, the energy level of the radar signal is 50 % (-3 dB) less

2.) With operating voltage $U_n \ge 24 \text{ V DC}$

3.) Time span after a sudden distance change from 1...5 m until the output signal reaches 90 % of the final value for the first time (IEC 61298-2).

4.) Already included in the measurement deviation

2. Product versions

2.1. Plastic horn antenna 80 mm

Product details			
Material	Non wetted parts:		
	antenna cone in PBT-GF 30		
	mounting bracket and fixing screws, in stainless steel 316L		
	Wetted parts:		
	focus lens in PP		
Beam angle	3°		
Measuring range	030 m		
Vibration resistance	With mounting bracket: 1 g with 5200 Hz according to EN 60068-2-6 (vibration at resonance)		
	 With adapter flange (as an option): 2 g with 5200 Hz according to EN 60068-2-6 (vibration at resonance) 		
Process temperature	-40+80 °C (-40+176 °F)		
Process pressure	With adapter flange: -11 bar (-100100 kPa/-14.514.5 psig)		
Accessories			
Material	Non wetted parts:		
	fixing screws for adapter flange in stainless steel 304		
	Wetted parts:		
	adapter flange for PP-GF30 black		
	• seal for adapter flange in FKM (COG VI500)		

2.2. Thread with integrated antenna 40 mm

Product details	
Material	Wetted parts:
	 process connection in stainless steel 316L
	antenna in PEEK
	seal Antenna system in FKM
	process seal in NBR with aramid fibres
Beam angle	• 14° for version G¾ or NPT¾
	• 7° for version G 1½ or NPT 1½
Measuring range	• 010 m for version G¾ or NPT¾
	• 020 m for version G 1½ or NPT 1½
Vibration resistance	4 g with 5200 Hz according to EN 60068-2-6 (vibration at resonance)
Process temperature ^{1.)}	-40+130 °C (-40+266 °F)
Process pressure	-120 bar (-1002000 kPa/-14.5290.1 psig)

1.) Take into account reduced ambient temperature. Detailed information can be found in chapter "4.2. Temperature derating diagram" on page 11

burkert

2.3. Flange with encapsulated antenna system

Product details	
Material	Wetted parts:
	flange plating, antenna encapsulation in PTFE
	seal in PTFE
Beam angle	6° for version DN50
	• 3° for version DN100
Measuring range	025 m for version DN50
	• 030 m for version DN100
Vibration resistance	4 g with 5200 Hz according to EN 60068-2-6 (vibration at resonance)
Process temperature ^{1.)}	-40+130 °C (-40+266 °F)
SIP process temperature	+ 150 °C (+ 302 °F), vapour stratification up to 2 h
Process pressure	-116 bar (-1001600 kPa/-14.5232 psig)

1.) Take into account reduced ambient temperature. Detailed information can be found in chapter "4.2. Temperature derating diagram" on page 11

2.4. Hygiene connection with encapsulated antenna system

Product details				
Material	Wetted parts:			
	hygienic antenna encapsulation in PTFE			
	seal in PTFE			
Surface roughness of the antenna encapsulation	Ra <0.8 μm			
Beam angle	6°			
Measuring range	025 m			
Process temperature	-40+130 °C (-40+266 °F)			
SIP Process temperature	+ 150 °C (+ 302 °F), vapour stratification up to 2 h			
Process pressure	-116 bar (-1001600 kPa/-14.5232 psig)

5. Product installation

5.1. Mounting options

Plastic horn antenna 80 mm with mounting bracket

The mounting bracket allows simple mounting of the instrument on a wall, ceiling or boom. Especially in the case of open flumes, this is a simple and effective way to align the sensor to the surface of the liquids.

Plastic horn antenna 80 mm with flange

An adapter flange is available for mounting the device on a socket.

6. Product operation

6.1. Measuring principle

The radar measuring device for the measurement of liquid levels consists of a housing with electronics and a process connection with antenna. The antenna of the radar sensor emits a continuous radar signal. This is reflected by the liquid surface and received by the antenna as an echo. Radar waves propagate at the speed of light. The frequency difference between the transmitted and received signal is proportional to the distance to the liquid surface. The filling level is calculated and converted into a corresponding output signal and transmitted as a measured value.

The measuring range of the radar level measuring device begins physically at the end of the antenna. However, the min./max. adjustment begins at the reference plane. The reference plane is different depending on the sensor version.

- Plastic horn antenna: the reference plane is the sealing surface on the lower edge
- Thread with integrated horn antenna: the reference plane is the sealing surface at the bottom of the hexagon
- Flange with encapsulated antenna system: the reference plane is the lower edge of the flange plating
- Hygiene connection with encapsulated antenna: the reference plane is the highest contact point between sensor process fitting
 and welded socket

6.2. Product operation notes

Note:

The measuring device can be adjusted with:

- the display/configuration module
- the suitable Bürkert DTM in conjunction with a software according to the FDT/DTM standard, e.g. PACTware™ and PC

The entered parameters are generally saved in the measuring device Type 8139. Optionally, parameters may also be uploaded and downloaded with the display/configuration module or saved in a file by using PACTware™/8139-DTM.

Set up with display/configuration module

Display/configuration module Description Image: transform the display/configuration module can be inserted into the measuring device and removed again at any time. It is not necessary to interrupt the power supply. The measuring device is adjusted via the four keys of the display/configuration module.

Set up with PACTware™/DTM and HART communication

7. Product accessories

Note:

The accessories for the plastic horn antenna 80 mm must be ordered separately.

8. Ordering information

8.1. Bürkert eShop - Easy ordering and quick delivery

8.2. Bürkert product filter

8.3. Ordering chart

Note:

All following versions are supplied without display/configuration module.

Description	Operating voltage	Output	Process connection	Electrical connection	Article no.
