Регулирующие клапаны с электроприводом Burkert

Electromotive process valve - 2-way angle-seat control valve

- good and fast control
- weather, impact and vibration resistant design
- easy cleaning by its design according hygienic demands
- many diagnostic functions by monitoring of valve and operation data

The innovative process controller Bürkert valve Type 3360 is the solution when it comes to control tasks under demanding operating conditions. The electromotive actuator with ball screw positions the control come with highest precision. A unique feature is its high positioning speed of 6 mm/s, that reacts quasi delay-free to process signals, and can be varied according to customer demands. Pressure variations or shocks in the medium aren't transferred to the valve position. If necessary, the safety position can be approached by an optional energy storage in case of power failure. Actuator and valve are adapted perfectly to each other with closed design and robust surface. This ensures the hygienic requirements of a fast and residue-free cleaning. Harsh environment are no problem for the Type 3360 because of the protection class IP65 / IP67 and its high impact and vibration resistance. Unrivalled cycle life and sealing integrity is guaranteed by the proven self adjusting spindle packing with exchangeable V-seals. The fieldbus suitable Type 3360 provides many helpful functions for process monitoring, valve diagnostics and predictive maintenance and thus offers the decisive advantage of a modern process automation.

Technical data	
Kvs values	5 ... 53 m ³ /h
Port size	DN 15 ... DN 50
Operating pressure	16 bar / 1600 kPa / 232 psi
Port connections	<ul style="list-style-type: none"> ▪ thread ▪ weld ends ▪ clamp <ul style="list-style-type: none"> ▪ G, RC, NPT (EN ISO 228-1, ISO 7/1 /DIN EN 10226-2, ASME B 1.20.1) ▪ EN ISO 1127 / ISO 4200, DIN 11850 R2, ASME BPE, BS 4825-1, SMS 3008 ▪ ISO 2852, DIN 32676, ASME BPE, BS 4825
Medium	Neutral gases, water, alcohol, oils, fuel, hydraulic mediums, salt solution, alkali solutions, organic solvents, steam
Viscosity	max. 600 mm ² /s
Media temperature	-10...+185 °C (seat sealing steel/steel) -10...+185 °C (seat sealing PEEK/steel) -10...+130 °C (seat sealing PTFE/steel)
Ambient temperature	-25 °C ... +65 °C (without touch display) -25 °C ... +60 °C (with touch display) -25 °C ... +55 °C (with SAFEPOS energy storage) Note: Derating see temperature chart
Seat leakage according IEC 534-4/EN 1349	Shut-off class III and IV for steel/steel Shut-off class VI for PTFE/steel and PEEK/steel
Safety position at power failure	with SAFEPOS energy-pack: opened, closed or free programmable without SAFEPOS energy-pack: blocked in last position
Power supply	24 V DC +/- 10% (max. residual ripple 10%)
Closing time	2.3 ... 4.3 s (depending on stroke)
Travel speed	6 mm/s
Duty cycle	100%
Protection class	IP65 / IP67
Analogue control	Setpoint: 0-20 mA, 4-20 mA, 0-5 V, 0-10 V actual value optional
Digital control (fieldbus)	EtherNet/IP, Modbus/TCP, Profinet
Approval and Conformity	FDA, EGV 1935/2004

Structure and function

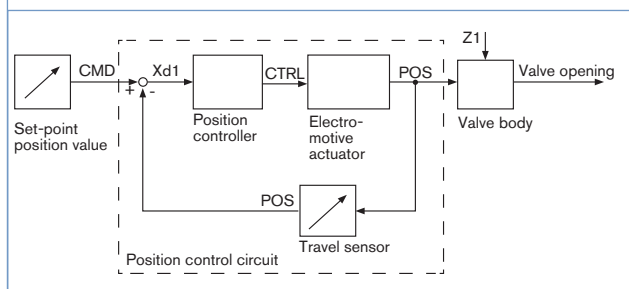

The electromotive linear actuator consists of a brushless direct current motor, gears and a threaded spindle. The valve spindle, which is connected to the threaded spindle, transfers the force to the control cone. The electronic control system of the position controller is actuated either via standard signals (analog) or via a field bus (digital). Optionally there is the energy pack (SAFEPOS energy-pack) for the device. If the supply voltage fails, the energy pack supplies the actuator with the required energy to move the valves into the required position which can be adjusted via a menu.

The valve position can be manually changed in 2 ways. Either over an electrical manual control or over mechanical manual control, if no supply voltage applied. The device can be set and operated either via 2 capacitive buttons and 4 DIP switches or optionally on a display with touch-screen. There is also the option of setting the device via the bus Service interface and by using the PC software "Bürkert-Communicator".

The intelligent process valve Type 3360 offers the operator options for process monitoring, valve diagnostics and predictive maintenance. Internal measurements for the operating state are evaluated and, if issued as a warning or error message. This signal, for example, undue environmental and process conditions, functional deviations of components or the state of the energy accumulator. Internal measurements for operating state are evaluated and, possibly a warning or error message is issued. This signal indicates, for example, bad environmental and process conditions, functional deviations of components or the state of the energy accumulator.

Structure, electromotive angle seat control valve Type 3360

Integrated position controller

The position of the actuator (stroke) is regulated according to the set-point position value. The set-point position value is specified either by an external standard signal (analog) or via a field bus (digital). The travel sensor records the actual position (POS) of the electric linear actuator. The position controller compares this actual position value with the set-point position value (CMD) which is defined as standard signal. If there is a control difference (X_{d1}), the electromotive actuator is controlled via the CTRL variable and the actual position value is changed accordingly.

Safety position with energy storage (Option)

The safety starting positions in case of power interruption is realized with the optional energy storage SAFEPOS energy-pack. The desired position is adjusted from the menu. Here any intermediate position can be defined in addition to the end positions (NO / NC). The energy storage has a lifespan of up to 10 years, depending on the operating conditions. The power of the energy storage is monitored and a warning is displayed to indicate its life is coming to an end. The memory is designed as a plug-in module making it easy to exchange. Without energy storage, the valve remains in the last position.

Controls and indicators

Devices without display module

In the version without control display the basic functions are operated by 4 DIP switches and 2 pushbuttons. These are located under the dummy cover which can be removed manual by turning. Through the büS service access, the device can also be configured in detail with the Bürkert communicator software. For this, the optional USB-büS interface kit is required.

Robust display with control buttons (optional)

The robust display module is easy to use, it configures and displays all the required functions. In addition to the start screen you can also switch to the configuration view and user-specified views as needed. All functions of the device without display module like büS-Service interface are available, too.

Manual and electrical operation

The manual override for mechanical operation of the valve is located under the dummy cover or the display module.

Electrical manual override for the procedure is carried out directly on the touch screen, or in the version without a display by two buttons below the dummy cover.

360°- LED illuminated ring

To display the device status, the valve end position and the operating condition, a visible 360° LED illuminated ring is mounted around the dummy cover or the display module. The LED ring lights up, flashes or flashes in one or different colors. Depending on customer requirements 4 different LED modes can be selected (Namur mode, valve mode without warnings, valve mode with warnings, LED off)

Mechanical position indicator

The mechanical position indicator also indicates when the supply voltage of the current valve position fails

Controls and indicators, continued

**SIM card as data storage (option)**

With the SIM card optional device-specific values and user settings can be saved and quickly transferred to another device.

**bÜS service interface**

The bÜS service interface connects the device to the communicator software on a PC, laptop or smartphone. From there, a configuration of the device or failure diagnosis can be performed.

Design and materials view

Note: The angle-seat control valve **type 3360** could be delivered with miscellaneous port connection (thread, weld ends and clamp), there are not represented in the picture, but are made with same material as the valve body.

Technical data

Temperature chart

The maximum allowable ambient temperature and media temperature influence each other. The maximum allowable temperature curves of different device variants can be seen in the temperature chart.

Flow characteristic

Modified equi-percentile flow characteristic, engineered for a quick response during peak flow demand and fine control at lower flow.

Theoretical control ratio (KvS : Kv0): 50:1

KvR-value at 5% of stroke

Selection chart for seat sealing

Seat sealing type steel / steel is recommended for shut-off class III and IV.

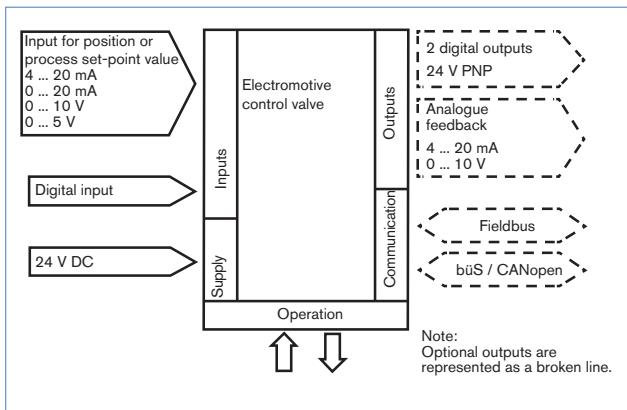

Seat sealing with PTFE is used for shut-off class VI, if fluid temperature is < 130 °C. If the maximum fluid temperature exceeds 130°C temporarily or permanently, then PEEK is used for seat sealing.

Shut-off class VI	PEEK / steel (T Media max. >130°C)	Operation pressure 0 ... 10 bar
	PTFE / steel	
Shut-off class III or VI	STEEL / steel	
	Fluid temperature -10°C ... 130°C	Fluid temperature 130°C ... 185°C

Port connection (tube)		Media pressure / seat sealing		Leakage class / seat sealing		Kv-values with stroke [m ³ /h]						Kvs-value [m ³ /h]
[mm]	[inch]	Stainless steel o. PTFE Stainless steel [bar]	PEEK / Stainless steel [bar]	PTFE o. PEEK / Stainless steel	Stainless steel / Stainless steel	5%	10%	30%	50%	70%	90%

Electrical control

Electrical data	
Protection class	3 acc. to DIN EN 61140
Electrical connections	Cable gland, 2 x M20 or 2 circular plug-in connector M12, 5-pin and 8-pin
Operating voltage	24 V DC \pm 10 % max. residual ripple 10 %
Operating current [A]*	max. 3 A including actuator at max. load and charging current of the optional SAFEPOS energy-pack (charging current approx. 1 A)
Lifelong energy storage SAFEPOS energy-pack	up to 10 years (depending on operating conditions)
Electronic without actuator [W]*	min. 2 W, max. 5 W
Control	
Input analogue:	galvanically isolated from the supply voltage and analog output 0/4...20 mA (input resistance 60 Ω) 0...5/10 V (input resistance 22 k Ω)
Output analogue:	Max. current 10 mA (for voltage output 0...5/10 V) Bürde (Last) 0...560 Ω (for current output 0/4...20 mA)
Output digital:	current limit 100 mA
Input digital:	0...5 V = log „0“, 10...30 V = log „1“ inverted input reversed accordingly
Communication interface:	Connection to PC via USB b \ddot{u} S interface set
Communication Software:	Bürkert communicator

**Electrical control and interface**

The position of the actuator is regulated according to the set-point position value. The set-point position value is specified either by an external standard signal (analog) or via a field bus (digital).

Analogue Control

For analogue control 2 variants are available for the inputs and outputs and the connection interface

Input and output:

- * 1 analogue input, 1 binary input
- * 1 analogue input, 1 binary input, 1 analogue output, 2 binary output (option)

Interface:

- * cable gland with connection terminal
- * M12 circular connectors M12 (option)

Fieldbus: EtherNet/IP, PROFINET, Modbus TCP (option)

The Fieldbus Gateway for EtherNet / IP, PROFINET and Modbus TCP is integrated into a special module. It has 2 fieldbus connections with 4-pin M12 circular connectors. Under the gateway housing cover are the interfaces for the fieldbus connection and status LEDs. If there is a need to be include it in a network then the configuration of the Ethernet can be performed via the web server.
