2/2-Way Solenoid Control Valve

- Made for custom engineered applications
- DN 0.8 ... 2.0 mm
- 1/8", sub-base or custom engineered armature

Type 2861 is an extremely compact solenoid control valve and is available with an orifice up to 2mm. It is based on the standard version of Type 2871 (see datasheet). It is used as an actuator in closed control loops (pressure, flow, temperature, etc.). Compared with the standard version, the valve is essentially of simpler construction and assembly and testing procedures are optimized, easing high volume series production with shorter delivery times. Please follow the instructions for a customised design on page 5 of this datasheet.

Circuit function A

direct acting 2-way
solenoid control valve,
normally closed

Valve control takes place through a PWM signal¹⁾. The duty cycle of the PWM signal determines the coil current and hence the position of the plunger.

The Burkert control electronics Type 8605 (see relevant datasheet) converts an analog signal to a reference value corresponding to the valve type PWM signal and provides additional functions such as temperature compensation (coil heating), ramp function and the adjustment of min. and max. duty cycle/coil current for the control range.

Please note the sizing comments for such a control valve on page 2.

Technical Data - Valve

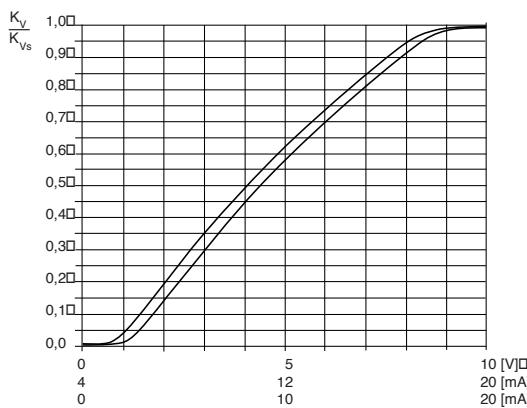

Body material	Brass, stainless steel
Seal material	FKM, EPDM on request
Medium	Neutral gases, liquids on request
Pressure range	0 ... -12 bar ²⁾
Medium temperature	-10 ... +90 °C
Ambient temperature	max. +55 °C
Power supply	24 V DC
Max. current	220mA (at 24V-hold)
Power consumption	5 W
Duty cycle	100% continuously rated
PWM control frequency	800 Hz
Port connection	Sub-base , G 1/8, NPT 1/8, others on request
Electrical connection	Cable plug Type 2507, Form B industrial standard Item no. 423 845
Installation	As required, preferably with actuator in upright position
Typical control data ³⁾	Hysteresis < 5% Repeatability < 1.0 % of F.S. Sensitivity < 1.0 % of F.S. Span 1:25
Protection class - valve	IP65

¹⁾ PWM pulse-width modulation

²⁾ Pressure values [bar]: Measured as overpressure to the atmospheric pressure, orifice further depends on nominal pressure

³⁾ Characteristic data of control behaviour depends on process conditions

Characteristics of a proportional valve

Advice for valve sizing

In continuous flow applications, the choice of appropriate valve size is much more important than with on/off valves. The optimum size should be selected such that the resulting flow in the system is not unnecessarily reduced by the valve. However, a sufficient part of the pressure drop should be taken across the valve even when it is fully opened.

Recommended value: $\Delta p_{\text{valve}} > 25\% \text{ of total pressure drop within the system}$

Otherwise, the ideal, linear valve curve characteristic is changed.

For that reason take advantage of Bürkert competent engineering services during the planning phase!

Determination of the k_v value

2/2-way Solenoid Control Valve

- Direct-acting, normally closed
- DN 3 to 12 mm
- Port Connection 1/2" or 3/4"

The direct-acting solenoid control valve, Type 2836, works as an electromagnetically actuated control valve in applications with relatively high flow rates. The valve is normally closed.

Valve operation A

Direct-acting,
2-way solenoid control
valve, normally closed

Valve control takes place through the control electronics of Type 8605, which converts an analogue input signal into a PWM²⁾ (pulse-width modulation) signal.

Further, functional features of the Type 8605 electronic control unit:

- Temperature compensation for coil heating by internal current regulation
- Simple zero and span settings
- Ramp function to dampen fast status changes

¹⁾ Pressure data [bar]: Overpressure with respect to atmospheric pressure

²⁾ PWM pulse-width modulation

Characteristics of a proportional valve

Advice for valve sizing

In continuous flow applications, the choice of an appropriate valve size is much more important than with on/off valves. The optimum size should be selected such that the resulting flow in the system is not unnecessarily reduced by the valve. However, a sufficient part of the pressure drop should be taken across the valve even when it is fully opened.

Recommended value: $\Delta p_{\text{valve}} > 25\% \text{ of total pressure drop within the system}$

Otherwise, the ideal, linear valve curve characteristic is changed.

If the differential pressure (difference between inlet and outlet pressure) exceeds half the value of the nominal pressure, the characteristics may change.

For that reason take advantage of Burkert competent engineering services during the planning phase!

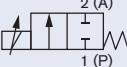

Determination of the k_v value

Pressure drop	k _v value for liquids [m ³ /h]	k _v value for gases [m ³ /h]
Subcritical $p_2 > \frac{p_1}{2}$	$= Q \sqrt{\frac{\rho}{1000 \Delta p}}$	$= \frac{Q_N}{514} \sqrt{\frac{T_1 \rho_N}{p_2 \Delta p}}$
Supercritical $p_2 < \frac{p_1}{2}$	$= Q \sqrt{\frac{\rho}{1000 \Delta p}}$	$= \frac{Q_N}{257 p_1} \sqrt{T_1 \rho_N}$

k_v	Flow coefficient	[m ³ /h] ⁴⁾	⁴⁾ Measured with water, $\Delta p = 1$ bar, differential pressure over the valve

2/2-Way Solenoid Control Valve

Type 2871 can be combined with...

Type 8605

Digital control electronics
DIN-rail version

Type 2507

Cable plug
DIN-rail version

- Excellent range (1:200)
- Very good response
- Compact valve design
- Orifice sizes 0.05 ... 2.0 mm
- Port connection 1/8" or sub-base

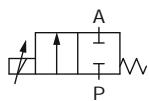

Type 8611

Universal controller

The direct-acting solenoid control valve Type 2871 (20mm installation width) is used as the regulating unit in control loops. Due to an elastomeric seat seal the valve closes tight (integrated shut-off function), up to the DN specific nominal pressure, see ordering chart on page 3.

The plunger of the valve is assembled frictionless, which leads to an extraordinary adjustment characteristic. This valve is particularly suitable for demanding control tasks (high control range, dry gases, etc.).

Circuit function A

direct acting 2-way
solenoid control valve,
normally closed

Valve control takes place through a PWM signal¹⁾. The duty cycle of the PWM signal determines the coil current and hence the position of the plunger. Optionally the valve can also be driven with DC voltage.

Please note the sizing comments for such a control valve on page 2.

¹⁾ PWM pulse width modulation

²⁾ Pressure data [bar]: Measured as overpressure to the atmospheric pressure, nominal pressure further depends on orifice size

³⁾ Maximum value, value depends on operating pressure

⁴⁾ Characteristic data of control behaviour depends on process conditions

⁵⁾ By flow measurement

Technical Data - Valve

Body material	Brass, stainless steel
Seal material	FKM, EPDM on request
Medium	Neutral gases, liquids on request
Pressure range	0 ... 12 bar ²⁾ – also applicable for technical vacuum
Medium temperature	-10 ... +90 °C
Ambient temperature	max. +55 °C
Power supply	24 V DC
PWM frequency	1500 Hz
Max. coil current	220mA ³⁾
Power consumption	2 W (up to DN 0,6), 5 W (from DN 0,8)
Duty cycle	100% continuously rated
Port connection	Sub-base , G 1/8, NPT 1/8, others on request
Electrical connection	Cable plug Type 2507, Form B industrial standard
Installation	As required, preferably with actuator in upright position
Typical control data⁴⁾ at PWM control	
Hysteresis	< 5%
Repeatability	< 0.25% FS ⁵⁾
Sensitivity	< 0.25% FS – < 0.1% FS with DN < 0.8 mm ⁵⁾
Span	1:200 (DN0.8-2), 1:500 (DN0.05-0.6)
Response time (10 -90%)	< 15 ms
Protection class valve	IP65

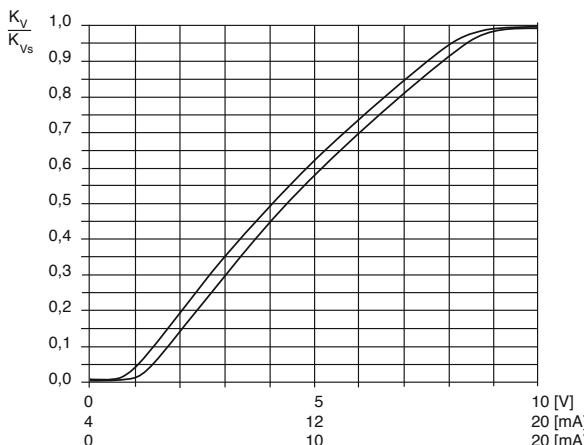

Technical data - Control electronics Type 8605 (see separate datasheet)

The valve control can take place through the control electronics of Type 8605, which converts an analogue input signal into a PWM signal.

Further functional features of the Type 8605 electronic control unit:

- Temperature compensation for coil heating by internal current regulation
- Simple adaptation of zero and span settings
- Ramp function to dampen fast set point changes

Characteristics of a solenoid control valve

Advice for valve sizing

In continuous flow applications, the choice of an appropriate valve size is much more important than with on/off valves. The optimum size should be selected such that the resulting flow in the system is not unnecessarily reduced by the valve. However, a sufficient part of the pressure drop should be taken across the valve even when it is fully opened.

Recommended value: $\Delta p_{valve} > 25\% \text{ of total pressure drop within the system}$

Otherwise, the ideal, linear valve curve characteristic is changed.

If the differential pressure (difference between inlet and outlet pressure) exceeds half the value of the nominal pressure, the characteristics may change.

For that reason take advantage of Burkert competent engineering services during the planning phase!

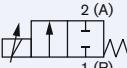

Determination of the k_v value

Pressure drop	k_v value for liquids [m ³ /h]	k_v value for gases [m ³ /h]
Subcritical $p_2 > \frac{p_1}{2}$	$= Q \sqrt{\frac{\rho}{1000 \Delta p}}$	$= \frac{Q_N}{514} \sqrt{\frac{T_1 \rho_N}{p_2 \Delta p}}$
Supercritical $p_2 < \frac{p_1}{2}$	$= Q \sqrt{\frac{\rho}{1000 \Delta p}}$	$= \frac{Q_N}{257 p_1} \sqrt{T_1 \rho_N}$

k_v	Flow coefficient	[m ³ /h] ⁶⁾	⁶⁾ measured for water 20°C, Δp 1 bar over the value
Q_N	Standard flow rate	[m ³ /h] ⁷⁾	⁷⁾ At reference conditions 1.013 bar and 0°C (273K)
p_1	Inlet pressure	[bar] ⁸⁾	
p_2	Outlet pressure	[bar] ⁸⁾	
Δp	Differential pressure $p_1 - p_2$	[bar]

Type 2875 can be combined with...

Type 8605

Control Electronics,
Cable plug version

Type 8605

Digital control electronics
DIN-rail version

Type 2508

Type 8611

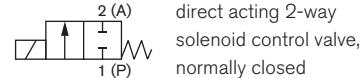

Universal controller

- Excellent range (1:200)
- Very good response
- Compact valve design
- Orifice sizes 2 ... 8 mm
- Port connection 3/8" and 1/2"

The direct-acting solenoid control valve Type 2875 is used as the regulating unit in control loops. Due to an elastomeric seat seal the valve closes tight (integrated shut-off function), up to the DN specific nominal pressure, see ordering chart on page 3. The plunger of the valve is assembled frictionless, which leads to an extraordinary adjustment characteristic. This valve is particularly suitable for demanding control tasks (high control range, dry gases, etc.).

Circuit function A

Valve control takes place through a PWM signal¹⁾. The duty cycle of the PWM signal determines the coil current and hence the position of the plunger. Optionally the valve can also be driven with DC voltage.

Please note the sizing comments for such a control valve on page 2.

¹⁾ PWM pulse width modulation

²⁾ Pressure data [bar]: Measured as overpressure to the atmospheric pressure, orifice further depends on nominal pressure

³⁾ Maximum value, value depends on operating pressure

⁴⁾ Characteristic data of control behaviour depends on process conditions

⁵⁾ by flow measurement

Technical Data - Valve

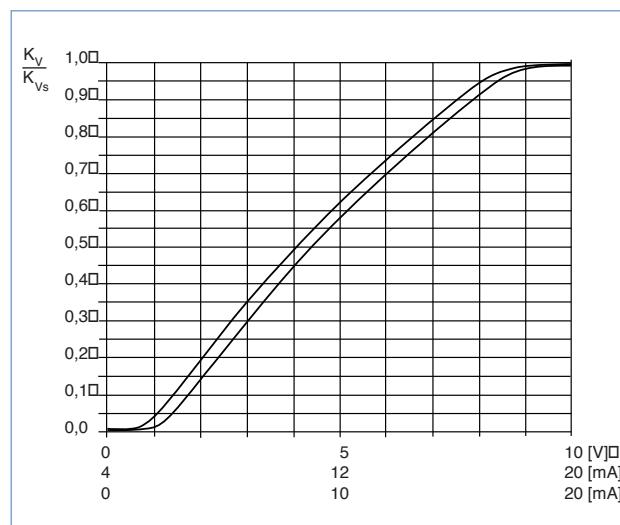

Body material	Brass, stainless steel										
Seal material	FKM, EPDM on request										
Medium	Neutral gases, liquids on request										
Pressure range	0 ... 25 bar ²⁾										
Medium temperature	-10 ... +90 °C										
Ambient temperature	max. +55 °C										
Power supply	24 V DC										
PWM frequency	900 Hz										
Power consumption	16 W										
Max. coil current ³⁾	750 mA										
Duty cycle	100% continuously rated										
Port connection	G 3/8, G 1/2, NPT 3/8, NPT 1/2										
Electrical connection	Tag connector (DIN EN 175301-803 Form A)										
Installation	As required, preferably with actuator in upright position										
Typical control data ⁴⁾ at PWM-Control	<table border="0"> <tbody> <tr> <td>Hysteresis</td> <td>< 5%</td> </tr> <tr> <td>Repeatability</td> <td>< 0.5% FS ⁵⁾</td> </tr> <tr> <td>Sensitivity</td> <td>< 0.25% FS ⁵⁾</td> </tr> <tr> <td>Span</td> <td>1:200</td> </tr> <tr> <td>Response time (10 -90%)</td> <td>25 ms</td> </tr> </tbody> </table>	Hysteresis	< 5%	Repeatability	< 0.5% FS ⁵⁾	Sensitivity	< 0.25% FS ⁵⁾	Span	1:200	Response time (10 -90%)	25 ms
Hysteresis	< 5%										
Repeatability	< 0.5% FS ⁵⁾										
Sensitivity	< 0.25% FS ⁵⁾										
Span	1:200										
Response time (10 -90%)	25 ms										
Protection class - valve	IP65										

The valve control can take place through the control electronics of Type 8605, which converts an analogue input signal into a PWM signal.

Further functional features of the Type 8605 electronic control unit:

- Temperature compensation for coil heating by internal current regulation
- Simple adaptation of zero and span settings
- Ramp function to dampen fast set point changes

Characteristics of a solenoid control valve

Advice for valve sizing

In continuous flow applications, the choice of an appropriate valve size is much more important than with on/off valves. The optimum size should be selected such that the resulting flow in the system is not unnecessarily reduced by the valve. However, a sufficient part of the pressure drop should be taken across the valve even when it is fully opened.

Recommended value: $\Delta p_{\text{valve}} > 25\% \text{ of total pressure drop within the system}$

Otherwise, the ideal, linear valve curve characteristic is changed.

If the differential pressure (difference between inlet and outlet pressure) exceeds half the value of the nominal pressure, the characteristics may change.

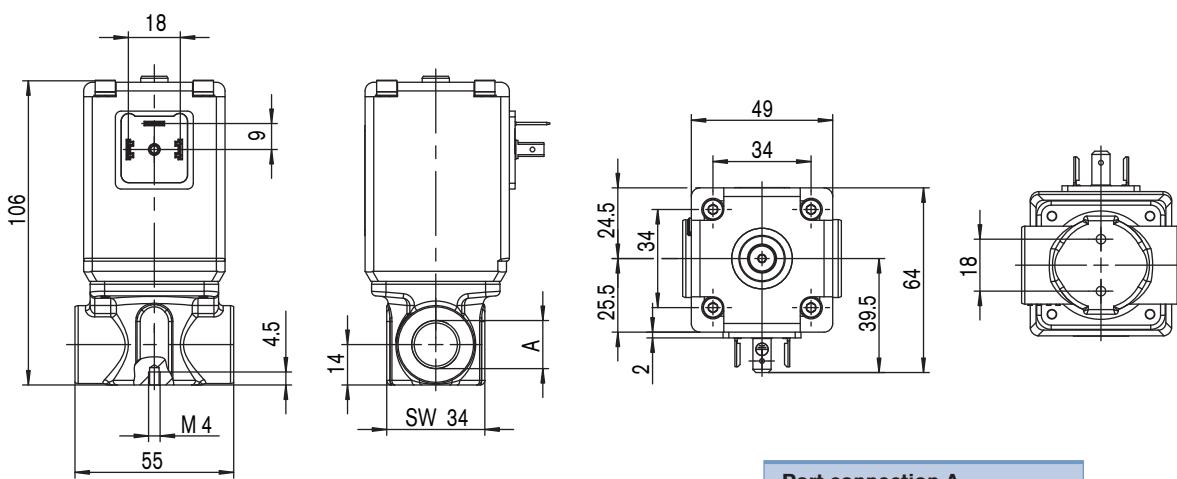

For that reason take advantage of Burkert competent engineering services during the planning phase!

Determination of the k_v value

Pressure drop	k_v value for liquids [m³/h]	k_v value for gases [m³/h]
Subcritical $p_2 > \frac{p_1}{2}$	$= Q \sqrt{\frac{\rho}{1000 \Delta p}}$	$= \frac{Q_N}{514} \sqrt{\frac{T_1 \rho_N}{p_2 \rho}}$
Supercritical $p_2 < \frac{p_1}{2}$	$= Q \sqrt{\frac{\rho}{1000 \Delta p}}$	$= \frac{Q_N}{257 p_1} \sqrt{T_1 \rho_N}$

k_v	Flow coefficient	[m³/h] ⁶⁾	⁶⁾ measured for water , $\Delta p = 1$ bar, over the valve
Q_N	Standard flow rate	[m _N ³ /h] ⁷⁾	⁷⁾ At reference conditions 1.013 bar and 0°C (273K)
p_1	Inlet pressure	[bar] ⁸⁾	
p_2	Outlet pressure	[bar] ⁸⁾	
Δp	Differential pressure $p_1 - p_2$	[bar]	
ρ	Density	[kg/m ³]	
ρ_N	Standard density	[kg/m ³]	
T_1	Medium temperature	[(273+t)K]	⁸⁾ Absolute pressure

2/2-Way Proportional Valve Low- Δp

Type 6024 can be combined with...

Type 8605

Control electronics
Cable plug version

Type 8605

Digital control electronics
DIN-rail version

- Direct-acting, normally closed
- 0 - 0.7 bar¹⁾
- DN 8 - 12 mm
- 1/2" or 3/4"

Type 2508

Cable plug

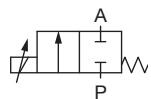

Type 8611

Universal controller

The direct-acting proportional valve Type 6024 works as an electromagnetically actuated control valve with relatively high flow rates at low operating pressures. The valve is normally closed.

Valve operation A

Direct acting 2-way proportional valve,
normally closed

It is controlled by Control Electronics Type 8605.

Further functional features of the Type 8605 electronic control unit:

- Temperature compensation for coil heating by internal current regulation
- Simple zero and span settings
- Ramp function to dampen fast status changes

Technical data - valve

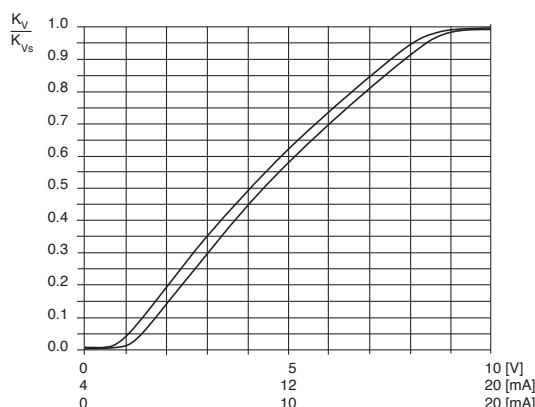

Body material	Brass, stainless steel
Sealing material	FKM, others on request
Media	technical vacuum
Medium temperature	-10 to +90 °C
Ambient temperature	Max. +55 °C
Viscosity	Max. 21 mm ² /s
Operating voltage	24 V DC
Power consumption	Max. 18 W
Duty cycle	100% continuously rated
Port connection	G 1/2, G 3/4 (NPT 1/2 and NPT 3/4 on request)
Electrical connection	Cable plug Type 2508 (DIN EN 175301-803 Form A)
Mounting position	Any, preferably with drive at top
Typical control data³⁾	Hysteresis < 7 % Repeatability < 0.5 % of F.S. Sensitivity < 0.5 % of F.S. Turn-down ratio 1:25 k_{vs} value ²⁾ Max. operating pressure ¹⁾ 1.4 to 2.8 m ³ /h 0.1 to 0.7 bar (depending on DN)
Protection class - valve	IP65 with plug-in module or cable plug on valve

¹⁾ Pressure data [bar]: Overpressure with respect to atmospheric pressure

²⁾ K_{vs} value [m³/h]: max. flow capacity for water

³⁾ Characteristic data of control behaviour depends on process conditions

Characteristic of a proportional valve

Advice for valve sizing

In continuous flow applications, the choice of appropriate valve size is much more important than with on/off valves. The optimum size should be selected such that the resulting flow in the system is not unnecessarily reduced by the valve. However, a sufficient part of the pressure drop should be taken across the valve even when it is fully opened.

recommended value: $p_{\text{valve}} > 30\% \text{ of total pressure drop within the system}$

For that reason take advantage of Bürkert competent engineering services during the planning phase!

Determination of the kv value

Pressure drop	kv value for liquids [m³/h]	kv value for gases [m³/h]
Subcritical $p_2 > \frac{p_1}{2}$	$= Q \sqrt{\frac{p}{1000 \Delta p}}$	$= \frac{Q_N}{514} \sqrt{\frac{T_1 p_N}{p_2 \Delta p}}$
Supercritical $p_2 < \frac{p_1}{2}$	$= Q \sqrt{\frac{p}{1000 \Delta p}}$	$= \frac{Q_N}{257 p_1} \sqrt{T_1 p_N}$

k_v	Flow coefficient	[m³/h] ¹⁾	¹⁾ measured for water, $\Delta p = 1 \text{ bar}$, via the device
Q_N	Standard flow rate	[m³/h] ²⁾	²⁾ Standard conditions at 1.013 bar ³⁾ and 0 °C (273K)
p_1	Inlet pressure	[bar] ³⁾	³⁾ Absolute pressure
p_2	Outlet pressure	[bar] ³⁾	
Δp	Differential pressure $p_1 - p_2$	[bar]	
ρ	Density	[kg/m³]	
ρ_N	Standard density	[kg/m³]	
T_1	Temperature if fluid medium	[(273+t)K]

Type 8605

Control electronics
Cable plug version

Type 8605

Digital control electronics
DIN-rail version

Proportional Valve with Control Electronics

- Control valve for continuous control of liquids
- Low hysteresis and high repeatability
- Control with PWM signal
- Servo-assisted, tight closing valve

Type 2508

Cable plug

Type 8611

Universal controller

The valve, Type 6223, can be used to control the flow of large amounts of liquids. Low hysteresis, high repeatability and good response sensitivity guarantee good positioning behaviour. The valve closes tight. The push-over coil is easy to replace.

Technical data

Orifice	DN 10, 13 and 20 mm
Body material	Brass, stainless steel on request
Seal material	FKM, others on request
Media	Neutral liquids
Media temperature	-10 to + 90 °C
Ambient temperature	Max. + 55 °C
Port connection	G 3/8, G 1/2, G 3/4, G 1
Viscosity	Max. 21 mm ² /s
Operating voltage	24 V DC
Power consumption	See ordering chart
Duty cycle	Continuous rating 100%
Electrical connection	Cable plug Type 2508 acc. to DIN EN 175301-803 Form A
Protection class valve	IP 65 with plug-on module or with cable plug on the valve
Installation	As required, preferably with actuator in upright position
Hysteresis	< 5%
Repeatability	< 1% FS
Sensitivity	< 1% FS
Settling time (90%)	< 200 ms
Span	1:10

Control Electronics for Solenoid Control Valves

Type 8605 can be combined with...

Type 8605

with operating unit combined with type 2873

Type 8605

without operating unit combined with type 2873

The digital control electronics, type 8605, serves to operate valves in the power range from 40 - 2000 mA.

The electronics converts an external standard signal into a pulse-width modulated (PWM) signal with which the opening of the valve and hence a fluidic output parameter (e.g. flow rate) can be infinitely varied. An internal current control with the duty cycle factor of the PWM signal as control variable ensures that every value of the input signal, irrespective of the thermal condition of the coil, is unambiguously assigned a given value of the effective coil current.

Compared to DC operation of solenoid control valves the PWM operation improves, among others, their sensitivity and hysteresis.

A display and operating keys allow the electronics to be easily adapted to a particular solenoid control valve and to the concrete conditions of an application.

- Microprocessor-controlled electronics
- Selectable input signal
- Adjustable PWM frequency
- Optional RS232 or RS485 interface

Technical data

Operating voltage	12 - 24 V DC
Voltage tolerance	±10 %
Residual ripple	<5 %
Power consumption	approx. 1 W (without valve)
Output current (valve)	max. 2A
Ambient temperature	-10 to 60°C
Input signal	0-20 mA, 4-20mA or 0-5V, 0-10 V (configurable)
Input impedance	<200 Ω (with current input) >20 kΩ (with voltage input)
Output signal for valve control	PWM signal – frequency adjustable from 80Hz to 6 kHz
Ramp function	Time variable from 0 to 10 s
Version	– Cable plug for direct installation (with PG- or M12 connection) – DIN-rail version (DIN EN 50022)
Protection class	Cable plug – IP65 DIN-rail – IP40
Housing material	Cable plug – Polyamide / PC DIN-rail – Polyamide / PBT

Functions of the controller Type 8605

- Microprocessor-controlled electronics
- Compensation of the solenoid coil heating by internal current control
- Configurable ramp function
- Adjustable zero point shutdown
- Display and buttons
- Selectable input signal
- RS232 or RS485 interface (with auxiliary module)
- Infinitely variable PWM frequency
- Simple adaptation of the minimum and maximum current (start of opening and full opening) to the actual pressure conditions

Notes:

- With two current ranges possible please choose the lower one.
- Please consider the internal resistance of the valve if used in combination with valves of other vendors. The internal resistance should not fall below 7Ω because the control electronics might be damaged if the resistance of the valve is too low.
- Successor types:
 - 2861, 2871 with 2822, 2824
 - 2863, 2873 with 2833
 - 2865, 2875 with 2835

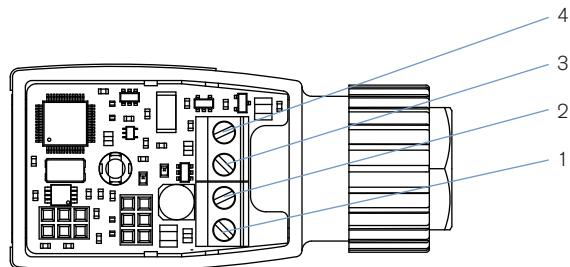

When using the older type please choose the control electronics indicated for the adequate new type.

Thanks to its compact design, the universal 8611 controller is especially designed for compact control system applications.

It is compatible and tested with all Bürkert proportional valves and sensors and can be connected with every none-Bürkert Control valve by standard signal (4...20 mA, 0...10 V or PWM-output).

The proportional & Integral (PI) process controller is equipped with many additional functions. The process value feedback can be supplied as one of three analog inputs; a standard signal (4...20 mA/0...10V), frequency or Pt100 signal; directly to the universal controller.

The process switching points can be set via a 4...20 mA or 0...10 V signal or with the keypad. For temperature specific control, it is possible to set a cascade structure with both temperature and flow as inputs.

Thanks to the proportional control capabilities, a wide range of control functions can be performed in a variety of liquids and gas medias.

Universal process controller eCONTROL

- Continuous, 2-point, 3-point and On/Off control
- Ratio control function
- Sensor inputs (4...20 mA, 0...10 V, frequency, Pt100)
- Control of proportional, process and motor valves
- Bürkert proportional valves and flow meters are memorized
- 1/16 DIN size panel version

8-pin M12 plug

- Power supply 24 V DC
 - Set point value (0...10 V / 4...20 mA)
 - Binary input
 - process value output (0...10 V / 4...20 mA)
 - PI-control output (0...10 V / 4...20 mA)
 - Binary output

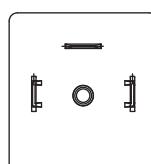

3-pin M8 plug

Sensor input
4...20 mA / 0...10 V, frequency or Pt100
Sensor power supply 24 V DC

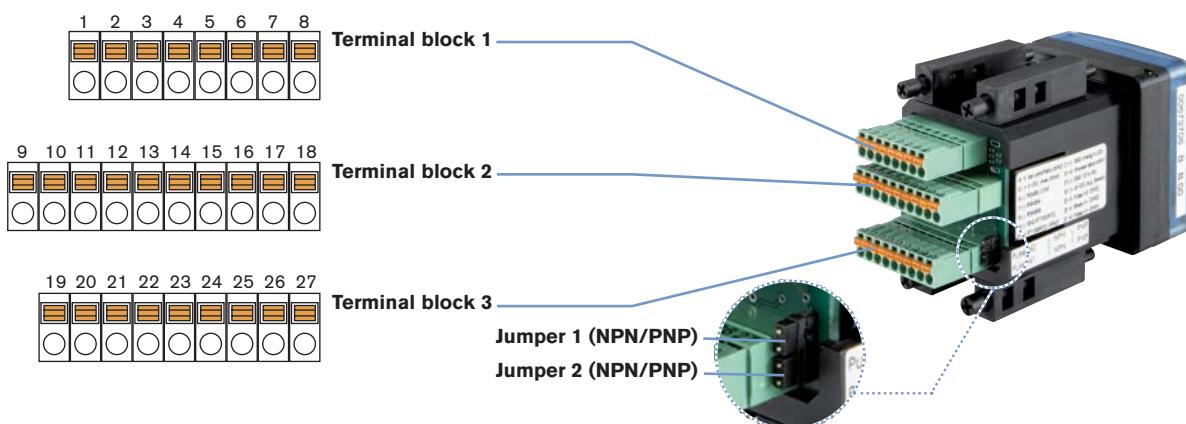

4-pin M8 plug

- PI-control output :
 - 1 x PWM output
 - 2 x PTM output
 - 0...10 V/4...20 mA output and power supply actuator 24 V DC (only Item no. 182 382)

DIN 175301-803

PWM output for Solenoid control valve

Ordering chart for universal Controller Type 8611

A controller Type 8611 consists of:

for Fitting-mounting

- an electronic module 8611
- an INLINE fitting S030 (DN06 - DN65)
- (Refer to corresponding data sheet)
- has to be ordered separately)

for Wall-mounting

- an electronic module 8611
- a wall-mounting adaptor (included)

for Rail-mounting

- an electronic module 8611
- a rail-mounted adaptor (included)

for Valve-mounting

- an electronic module 8611
- a proportional valve (Refer to corresponding data sheet of the proportional valve - has to be ordered separately)

for Panel-mounting

- an electronic module 8611
- 4 mounting brackets and 1 sealing (included)

Mounting disposition	Sensor input		controller outputs (*)		Operating voltage	Setpoint setting	Process value output	Binary In/Out	Item no.
	externe 	interne

* Either PWM/PTM or 4...20 mA/0...10 V selectable as PI-control output. If 4...20 mA/0...10 V selected as PI-output, the process value isn't available.

Ordering chart for accessories (has to be ordered separately)

	Description	Item no.
	Positioning system 8810 for pneumatic actuators with rail-mount adaptor	204 458
	4-pin M8 female right angle connector with self-locking threaded joint and 2 m molded cable (valve output)	918 718
	4-pin M8 female right angle connector with self-locking threaded joint and 5 m molded cable (valve output)	919 412
	3-pin M8 female right angle connector with self-locking threaded joint and 2 m molded cable (sensor input)	918 717
	3-pin M8 female right angle connector with self-locking threaded joint and 5 m molded cable (sensor input)	919 410
	4-pin M8 female connector, straight with snap-on connection and 2 m molded cable (valve output)	919 060
	3-pin M8 female connector, straight with snap-on connection and 2 m molded cable (sensor input)	918 039
	8-pin M12 female connector, straight with screw connection and 2 m molded cable (PUR) (Power supply)	919 061
	8-pin M12 female connector, straight with screw connection, to assemble (Power supply)	918 998
	2-pin female connector, straight with 3 m cable (for connection to Positioning system 8810)	133 486
	2-pin female connector, straight with 5 m cable (for connection to Positioning system 8810)	167 494
	2-pin female connector, straight with 0.3 m wire (for connection to Positioning system 8810)	644 068
	2-pin female connector, straight with 0.6 m wire (for connection to Positioning system 8810)	162 144

Ordering chart for spare parts (has to be ordered separately)

	Description	Item no.
	Wall-mounting adaptor	427 098
	Rail-mounting adaptor	655 980
	Mounting brackets (Set of 4 pieces)	560 225

Examples of applications

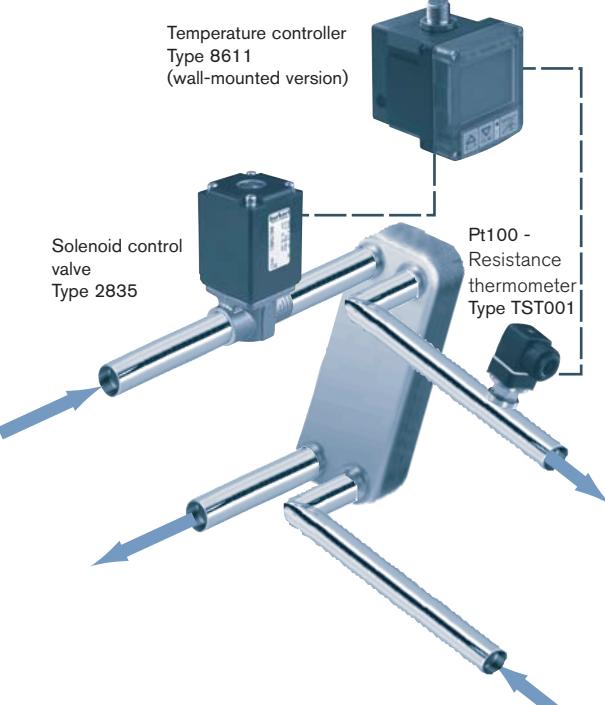

Cascaded temperature control with process control valve

Flow control with process control valve

Temperature control with solenoid control valve

Multi channel solution with process control valve
